**※Thank you for selecting the LandStar E/EU series solar charge controller. Please read this manual carefully before using the product and pay attention to the safety information.**

# Solar Charge Controller

## 1. Safety Information

- Read all the instructions in the manual before installation.
- DO NOT disassemble or attempt to repair the controller.
- Install external fuse or breaker as required.
- Do disconnect the solar module and fuse/ breakers near the battery before installing or moving the controller.
- Power connections must remain tight to avoid excessive heating from a loose connection.
- Only charge batteries that comply with the controller's parameters.
- Battery connection may be wired to one battery or a bank of batteries.
- Risk of electric shock, the PV and load can produce high voltages when the controller is working.

## 2. Overview

The LandStar E/EU series controller is a PWM charge controller that adopts the most advanced digital technique. It's an easy operation and cost-efficient controller featured as:

- 3-Stage intelligent PWM charging：Bulk, Boost/Equalize, and Float
- Support 3 charging options: Sealed, Gel, and Flooded
- Battery status LED indicator indicates battery situation
- Battery temperature compensation function
- With humanized settings, the operation is more comfortable and convenient
- The USB provides a power supply that can charge for electronic equipment**(LS EU series only)**
- Battery type and load output can be set via the button
- Extensive Electronic protection

## 3. Product Features

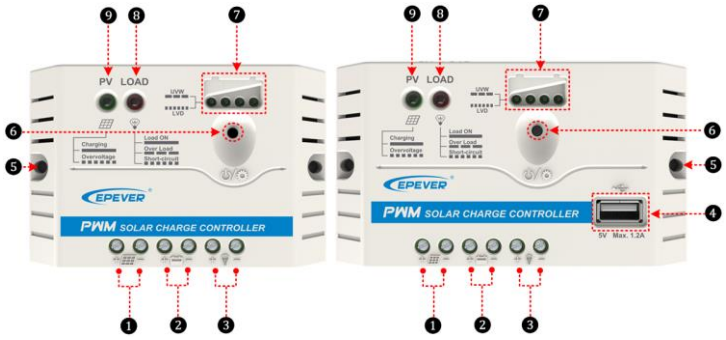

Figure 1 Product Feature

| | | | |
|---|---|---|---|
| ❶ | PV Terminals | ❻ | Load Switch Button |
| ❷ | Battery Terminals | ❼ | Battery status LED indicator |
| ❸ | Load Terminals | ❽ | Load status LED indicator |
| ❹ | USB output interface (LS EU series only) | ❾ | Charging status LED indicator |
| ❺ | Mounting Hole Φ4.5 | | |

## 4. Wiring

Connect the system in the order of ❶battery ➔❷ load➔ ❸PV array following Figure 2-2," Schematic Wiring Diagram," and disconnect the system in the reverse order❸❷❶.

**NOTE:** While wiring the controller, do not close the circuit breaker or fuse and ensure that the leads of "+" and "-" poles are connected correctly.

**NOTE:** A fuse whose current is 1.25 to 2 times the controller's rated current must be installed on the battery side with a distance from the the battery not greater than 150 mm.

**WARNING:** The controller has no PV reverse connection protection, please connect it correctly.

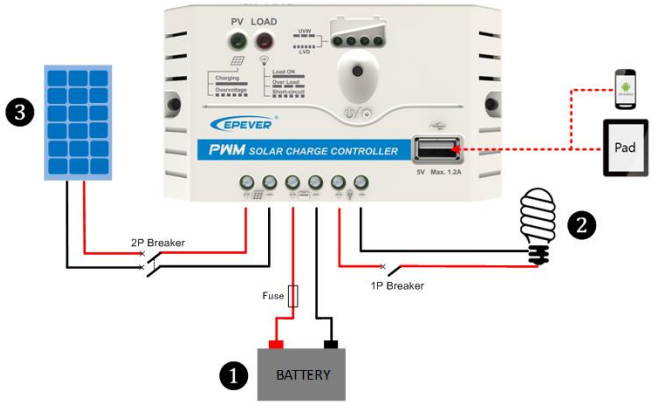

Figure 2 Connection diagram

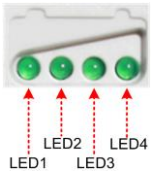
## 5. LED Indicators

**1) Charging and load status indicator**

| Indicator | Color | Status | Instruction |
|---|---|---|---|
| Charging status LED indicator | Green | On Solid | In Charging |
| | | OFF | No Charging |
| | | Fast Flashing | Battery Over Voltage |
| Load status LED indicator | Green | On Solid | Load ON |
| | | OFF | Load OFF |
| | | Slowly Flashing | Overload |
| | | Fast Flashing | Load short circuit |

**2) Battery status indicator**



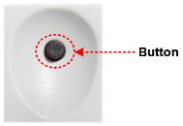
| LED1 | LED2 | LED3 | LED4 | Battery Status |
|---|---|---|---|---|
| Slowly Flashing | × | × | × | Under voltage |
| Fast Flashing | × | × | × | Over-discharge |
| Battery LED indicator status during voltage is up | | | | |
| ○ | ○ | × | × | 12.8V＜ $U_{bat}$＜13.4V |
| ○ | ○ | ○ | × | 13.4V＜ $U_{bat}$＜14.1V |
| ○ | ○ | ○ | ○ | 14.1V ＜ $U_{bat}$ |
| Battery LED indicator status during voltage is down | | | | |
| ○ | ○ | ○ | × | 12.8V＜$U_{bat}$＜13.4V |
| ○ | ○ | × | × | 12.4V＜$U_{bat}$＜12.8V |
| ○ | × | × | × | $U_{bat}$＜12.4V |

**NOTE:**

① The above voltage values are measured in the 12V system at 25℃; please double the values in the 24V system.

② "○" states LED indicator on; "×" states LED indicator off.

## 6. Operating



**1) Load ON/OFF Setting**

When the controller is powered on, press the button to control the load output.

**2) Battery Type Setting**

**Operation:**

**Step 1:** Enter the setting mode by pressing the button for 5s until the battery status LEDs are flashing.

**Step 2:** Select the desired mode by pressing the button.

**Step 3:** The mode is saved automatically without any operation for 5S, and the LED stops flashing. Battery Type Indicator shows as below:

| LED1 | LED2 | LED3 | Battery type |
|---|---|---|---|
| ○ | × | × | Sealed(Default) |
| ○ | ○ | × | Gel |
| ○ | ○ | ○ | Flooded |

**NOTE:** "○" states LED indicator on "×" states LED indicator off

**Battery Voltage Control Parameters**

Below parameters are measured in the 12V system at 25 ºC; please double the values in the 24V system

| Battery Type | Sealed | Gel | Flooded |
|---|---|---|---|
| Over Voltage Disconnect Voltage | 16.0V | 16.0V | 16.0V |
| Charging Limit Voltage | 15.0V | 15.0V | 15.0V |
| Over Voltage Reconnect Voltage | 15.0V | 15.0V | 15.0V |
| Equalize Charging Voltage | 14.6V | —— | 14.8V |
| Boost Charging Voltage | 14.4V | 14.2V | 14.6V |
| Float Charging Voltage | 13.8V | 13.8V | 13.8V |
| Boost Reconnect Charging Voltage | 13.2V | 13.2V | 13.2V |
| Low Voltage Reconnect Voltage | 12.6V | 12.6V | 12.6V |
| Under Voltage Warning Reconnect Voltage | 12.2V | 12.2V | 12.2V |
| Under Voltage Warning Voltage | 12.0V | 12.0V | 12.0V |
| Low Voltage Disconnect Voltage | 11.1V | 11.1V | 11.1V |
| Discharging Limit Voltage | 10.6V | 10.6V | 10.6V |
| Equalize Duration | 120 min. | —— | 120 min. |
| Boost Duration | 120 min. | 120 min. | 120 min. |

## 7. Protection

- **Battery Over Voltage Protection**
  When the battery voltage reaches the Over Voltage Disconnect Voltage(OVD), the controller stops charging the battery to protect the battery from being overcharged.
- **Battery Over Discharge Protection**
  When the battery voltage reaches the Low Voltage Disconnect Voltage(LVD), the controller stops discharging the battery to protect the battery from being over-discharged.
- **Overload Protection**
  The load is switched off when 1.25 times rated current overload happens. The user has to reduce the load appliance, then press the button or repower the controller.
- **Load Short Circuit Protection**
  The load is switched off when the load short circuit (≥3 times rated current) happens. The user has to clear the short circuit, then press the button or repower the controller.
- **High Voltage Transients Protection**
  The controller is protected against small high voltage transients. In lightning-prone areas, additional external suppression is recommended.

## 8. Troubleshooting

| Faults | Possible reasons | Troubleshooting |
|---|---|---|
| LED Charging indicator turn off during daytime when sunshine falls on PV modules properly | PV array disconnection | Confirm that PV and battery wire connections are correct and tight |
| No LED indicator | Battery voltage may be less than 8V | Measure battery voltage with the multi-meter. Min.8V can start up the controller |
| Charging status LED indicator fast flashing | Battery over voltage | Check if the battery voltage is higher than the OVD, and disconnect the PV |
| LED1 fast flashing | Battery over-discharged | When the battery voltage is restored to or above the LVR point (low voltage reconnect voltage), the load will recover |
| Load status LED indicator slowly flashing | Over load① | ① Please reduce the number of electric equipment.<br>② Press the button or repower the controller. |
| Load status LED indicator fast flashing | Load short circuit | ① Check carefully loads connection, clear the fault.<br>② Press the button or repower the controller. |

①When the load current reaches1.25 times, 1.5 times, and 2 times more than the nominal value, the controller can automatically turn off loads in the 60s, 5s, and 1s, respectively.

## 10. Disclaimer

This warranty does not apply under the following conditions:

- Damage from improper use or use in an unsuitable environment.
- PV or load current, voltage, or power exceeds the controller's rated value.
- User disassembly or attempted to repair the controller without permission.
- The controller is damaged due to natural elements such as lighting.
- The controller is damaged during transportation and shipment.
